Data Analyst/Engineer (Intern)

2026-09-30 · @Komal

An internship owning the data behind AI voice agents that speak with real customers every day. The numbers you build decide what those agents do next.

About the Role

We're looking for someone to own the data our clients make their decisions on. Every call our voice AI makes leaves a record: an outcome, a timestamp, a transcript of what was said. Turning that into insights a client can act on, and catching it when it goes wrong, is the job.

This role sits between analytics, engineering and operations. You'll work alongside the senior analyst and the campaign teams, write the SQL behind client dashboards, and run the daily checks that keep live campaigns honest. You'll start by owning the data itself and, as you learn the business, take on more of the analysis that gets built on it.

Key Responsibilities

- Build and own the SQL datasets behind live client dashboards: the lead-to-call-to-conversion funnel that lenders, insurers and marketplaces use to judge whether our AI agents are working
- Measure whether our voice agents did what they claim: compare what a call recorded as its outcome against what the transcript actually shows, and quantify where the two diverge
- Trace operational breakages to their cause, from failed lead uploads to campaigns that stop dialling, and build the datasets that settle questions like whether a new prompt or call flow actually performed better
- Catch agent failures in production (mid-call silences, speech-recognition errors, conversations that dead-end at the same step) and size the impact in calls and customers affected
- Turn repeated analysis into tooling (scripts, scheduled checks, internal dashboards) using Claude Code and our internal MCP servers, so the work runs itself the next time
- Take a client question that has no obvious answer, work out what data could answer it, and go and get it
- Document and hand over what you build, including the prompts and agent workflows behind it, so it compounds into the team's toolkit instead of living on your laptop

What You'll Need

- Working SQL: joins, grouping and aggregation, and the ability to explain what a query actually returns
- Strong attention to detail, especially with numbers that other people will act on
- Strong problem-solving skills and the patience to trace a discrepancy to its cause
- Comfort with Python, or any scripting language, for automating repetitive data work
- Clear written and verbal communication in English, including explaining technical findings simply
- Ability to handle large spreadsheets and data files without losing track of versions or definitions
- Ability to work in a fast-paced, dynamic environment
- Pursuing or completed a Bachelor's degree in any discipline; we care about the skills, not the subject

Nice to Have

- Coursework or projects using real, messy datasets rather than clean teaching data
- Exposure to a BI or dashboarding tool such as Metabase, QuickSight, Power BI or Tableau
- Comfort reading call transcripts or operational logs to work out what actually happened
- Familiarity with cloud data platforms such as AWS, GCP or Azure
- Basic version control with Git

What We're Looking For

- **User-obsessed:** the client's decision is the point of every number; you think about who acts on it
- **Communication:** you over-communicate, clearly and precisely, both verbally and in writing, including the caveats on your own numbers
- **Timeliness:** you respect timelines and communicate beforehand if there is a blocker
- **Ownership:** you follow a discrepancy to its cause instead of escalating it away
- **Grit:** you run the hundredth day's check as carefully as the first
- **Intellectual curiosity:** you ask what a number is for, and go and learn the part of the business you don't yet understand
- **Entrepreneurial:** you are empowered to take decisions and act on them, treating this startup as your own

Above all, someone who assumes a surprising result is their own error until they have proved otherwise. We care far more about how you chase down a number that doesn't add up than about what's on your résumé.

About Arrowhead

What we are: the most human-like voice AI bot for BFSI.

Hear it for yourself:

- Loan sales call
- Health insurance sales call

What we've done:

- Proven to be the most human-like bot in the market. We competed in POCs against 6+ other voice AI companies and came out as #1 to win contracts.
- Grown the fastest of any voice AI company in India. In under 8 months we've worked with:
  - Banks and NBFCs: Aditya Birla, RBL Bank, Axis Bank, IndusInd Bank, Shriram Finance, Bajaj Auto and others
  - Fintechs: Cred, Paytm, Turtlemint, InsuranceDekho, Simpl and others
  - Others: Physics Wallah, Tata 1mg, Aakash Institute, upGrad and others
- Just closed our $3 mn seed round.

Our clients

Aditya Birla, Axis Bank, Paytm, Cred, IndusInd Bank, Shriram Finance, Bajaj Auto, Tata 1mg, and more.

Culture and growth

What our existing team says about our culture:

> Arrowhead's culture is nothing like I've seen in any organization I've worked at. I actually feel like I can express my ideas and that they will be heard and implemented here. I've never felt this empowered before.

Grow to unparalleled levels. At Arrowhead we have a deep focus on being the best: the best product and the best partner to the customer. This is how we've gotten to where we are today, and how we will continue to grow into the largest BFSI-focused voice AI company in Asia.

It is not for the faint of heart. You will learn the most, grow the most and do the most you've ever done. But you have to be willing to put in the blood, sweat and tears to get there.
